WINDOW MODE'S "SOLAR SCRIM" SHADING SYSTEM REGULATES THE LIGHT IN A SOPHISTICATED CUSTOM-FIT BILLIARD ROOM

Window Modes, Ltd., the design industry's leading resources in window treatments, has combined the finest European solar screen technology with the most innovative variety of shading systems to create "**Solar Scrim**", a unique window treatment for sun control.

Shown is a unique application of "**Solar Scrim**" created by Window Modes for this sophisticated billiard room. The remote-controlled, motorized shades were custom fit for the tiered, triangular windows and adjust in order to control the amount of light let into the room. In an instant, the versatile complexion of the room can change in order to meet the usage of the moment.

"**Solar Scrim**" significantly reduces radiant heat, ultra violet rays and glare while allowing a clear, subdued view to the outside. Durable, fade resistant, fire resistant, dimensionally stable and due to an anti-static treatment, "**Solar Scrim**" products are virtually maintenance free.

Window Modes can custom fabricate to precise specifications for any solar shading requirement, such as greenhouses and sunrooms. "**Solar Scrim**" is available by the yard as roller shades with clutch lift mechanism, or motorized as removable fixed screens for interior or exterior applications such as solar romans, vertical blinds or panel tracks.
